In the Specification:

Paragraph beginning at line 11 of page 7 has been amended as follows:

After execution of command step 350, the program proceeds to a call command step 352 that causes an auto-exposure subroutine to be executed, such as the auto exposure subroutine described in U.S. patent application Serial No.[_____] 09/661,883. After the auto-exposure subroutine is executed, the program returns to the step, a decision step 354 to determine whether the user has utilized the mode selection switch 28 to place the camera 10 in other than the capture mode of operation. If this condition is true, the camera advances to a command step 355 that causes the LCD unit 38 to turn off in order to conserve camera power. After executing command step 355 the camera goes to decision step 318 and proceeds as described previously.
